

# **SHDH1014 Fundamental Visualisation Skills (MID)**

## **Individual Assignment 1 — Storyboard Development**

### **Introduction**

This assignment is designed to assess your practical capability in visual storytelling and composition, specifically focusing on shape, colour, and placement. Drawing from the concepts covered in Weeks 1–3 (digital production fundamentals, shape/form/colour/symbol, and basic design principles), you are required to design a storyboard that communicates a simple visual narrative using only basic geometric shapes.

### **Task (Individual)**

In this assignment, you must design a storyboard of at least six panels that tells a coherent visual story. Each panel should demonstrate an understanding of visual composition, including the use of shape, colour, and placement to convey meaning, emotion, or action.

### **Requirements:**

**Narrative clarity:** The storyboard must present a clear beginning, middle, and end. Viewers should be able to understand the story without written explanation.

**Visual composition:** Each panel must demonstrate considered use of basic geometric shapes, colour choices, and spatial arrangement.

**Creativity and originality:** The story concept and visual treatment should reflect personal interpretation and imaginative use of limited visual elements.

**Technical execution:** Panels should be neatly produced by hand or digitally; all shapes, lines, and colours must be clearly visible.

### **Presentation / Documentation (if applicable):**

**Format:** A single PDF document or scanned/photographed hand-drawn sheets compiled into one PDF.

**Labelling:** Include a title, your name, student number, and a short one-paragraph description of the story concept on the first page.

**Panel dimensions:** Each panel should be clearly framed and large enough to be legible on screen.

### **Submission**

**File format:** PDF.

Submit the required file(s) to the e-Learning platform (Blackboard).

**Deadline: Date: [07OCT2026] Time: HKT [23:59]**

Please name your file according to the following format:

"[English full name]\_[student number].[extension]"

For example:

"ChanTaiMan\_123456.[extension]"

The maximum file size for submissions on the e-Learning platform (Blackboard) is 250MB. Ensure your submission is compressed to adhere to this limit. If you encounter difficulties reducing the file size below this threshold and are unable to upload the file, you have the option to upload your work to a cloud storage service (e.g., Google Drive / OneDrive). After uploading, send the download link to [lazarus.chan@cpce-polyu.edu.hk](mailto:lazarus.chan@cpce-polyu.edu.hk). This should be a last resort only after attempting and failing to compress your materials sufficiently. The timestamp on your email will be taken as the time of submission.

### **Plagiarism**

You are strongly advised to pay attention to the rules and guidance notes regarding plagiarism, how sources should be referred to, and bibliography referencing as stipulated in the Student Handbook.

The College may take disciplinary actions against students when there is evidence of collusion between individuals. The work of others which is included in the assignment must be attributed to its source (a full bibliography and a list of references must be submitted). Failure to observe such requirements may lead to serious consequences for your study in this subject and your registration at the College. Please refer to the Section "Penalties for Offences" in the Student Handbook for details.

You are also strongly advised to review the hot tips about plagiarism and how to avoid it with reference to the Plagiarism Booklet.

In principle, CPCE considers GenAI tools as positive and creative forces in education and encourages their use in learning, teaching, and assessment. However, extensive copy-pasting from AI-generated content without citation is considered plagiarism.
